UI Design – Personal Portfolio Site

Requirements

- Portfolio website must be accessible over the internet
- The layout must be responsive; adapts to PC and smartphone screen ratios
- Must be a static website to reduce complexity and costing
- Must present developer contact information on a dedicated page
  - This page must include a link to download the developer's CV
- Must include information on a variety of the developer's projects
  - Presents 'cards' for individual projects
  - Cards link to project-specific writeup pages
  - A selection of cards must be presented on the home page
  - A dedicated projects page must feature all cards

Wireframes

Home Page

The home page presents a photo of the developer, alongside their name and a short description about their personality and interests. Below, a selection of project cards are then presented underneath a header, with a call-to-action button overlain for viewing more projects – which navigates to the projects page.

Projects Page

This page presents the full selection of project cards, each of which link to project-specific writeup pages. To navigate to other pages, the app bar can be used (top of the page).

Project Writeup Page

Project writeup pages will vary with the projects themselves. They should be familiar to markdown documents – simple pages with headings, links and images.

Contact Page

The contact page again presents a photo of the developer, alongside their contact details. Additionally, the user should have the option to download the developer's CV from this page (presented as a button).
